

**PRESS RELEASE**

**MEGA URANIUM LTD.:** "MGA" (TSX-V)

**FOR IMMEDIATE RELEASE:** December 1, 2005

**HAMLIN COPPER-SILVER-GOLD-MOLYBDENUM ZONE CONTINUES TO EXPAND  
IN THE SHEBANDOWAN CAMP, THUNDER BAY, ONTARIO**

- Hamlin-Shebandowan mineralized zone expanded beyond 100 metres
- Copper Equivalent of 0.45% over 96 m (316 feet) on drill hole HAM-05-36 Including:
  - 0.79% copper over 25 metres
  - 0.81% copper over 10 metres
- Geophysical surveys underway to help trace sulphide targets
- Current drilling campaign extended to mid December given the success to date

Toronto, Ontario, Canada, December 1, 2005 – Mega Uranium Ltd. ("Mega") (MGA-TSX-V) is pleased to provide a further update on the drilling progress on the Hamlin – Shebandowan property, 100% owned by Mega's Maple Minerals division and East West Resource Corporation ("East West") (each hold a 50% interest). Mega has been advised by East West that the zone continues to steadily grow and is now 100 metres wide with consistently good grades. East West further advises that they are going to extend the fall drill campaign ahead of the holiday-season break subject to weather conditions, with the results of this phase being used to assist in planning for the January-February program at Hamlin-Shebandowan with the aim of quantifying the length of the deposit.

**Geological details**

Hole HAM-05-36, located 50 m north of hole HAM-05-29b and HAM-05-30, drilled at –55° passes 75 m below hole 29b and 30 and has extended the zone of copper mineralization to a 100 m width and traced the zone to depth. Hole 36 is 120 m east of hole HAM-05-34 and 450 m west of hole 33 (see NR Nov 16 & 23, 2005).

It was learned from HAM-05-33 that massive sulphide zones occur with higher grades of copper where sulphide zones are located below the overlying volcanics. Airborne EM anomalies located along the volcanic-breccia contact reflect the presence of massive sulphide zones and these targets are located on the lines 4E-5E, 10E, 11E and 12E areas on the west end of the grid as well as along the L15E-19E area adjacent to the main IP anomaly trend on the east end. The IP anomaly is open to the east where the Deaty Creek grid begins and these anomalies continue to 70E (7 kms) from the L0 point on the west end. A series of IP anomalies that reflect breccia zones along the 7 km trend. Mise-a-la-Masse surveys are to be carried out in December to guide follow up drilling on the massive sulphide sections. Silver and gold values

continue to track with copper and molybdenum and are located throughout the section with higher molybdenum values located to the south.

In hole HAM-05-36 a 96m wide zone has been split and assayed with additional assays pending that are expected to increase the width of the zone to 197.1 m. Five zones within the 96m interval are presented on the attached table for brevity. A complete table for the 96m will be posted on SEDAR at [www.sedar.com](http://www.sedar.com).

\* Copper equivalent is calculated using assumed metal prices of US \$1.80/lb Cu, US \$460/oz Au, US \$30.00/lb Mo, and US \$7.00/oz Ag, and is not adjusted for metallurgical recoveries, as these remain unknown. The formula used is as follows: Cu Eqv. (%) =  $[(Cu\$ + Ag\$ + Au\$ + Mo\$) / 1.8] / 22$ . (500 ppm = 0.05 % = 1.0 lbs/ton)

Basemetal and silver values (Copper, Silver, Molybdenum) were determined by ICP induced coupled plasma) after an aqua regia acid digestion. Assays exceeding 100 grams Silver and 10,000 parts per million copper were repeated using multi acid digestion and atomic absorption (AA). Check assays were run on high values. Preparation of the samples outlined in this news release were carried out by ALS Chemex in Thunder Bay and assaying was carried out by ALS Chemex in North Vancouver.

Gold values were determined by fire assay extraction on 30 gram samples followed by an AA finish.

The project set out above is being supervised by R. Middleton, P.Eng. who is the qualified person and responsible for quality control of the assaying and reporting. More details are available on SEDAR at [www.sedar.com](http://www.sedar.com).
