

PRESS RELEASE

MEGA URANIUM LTD.: "MGA" (TSX-V)

FOR IMMEDIATE RELEASE: April 3, 2006

**NEW DEATY GOLD ZONES
SHEBANDOWAN CAMP, THUNDER BAY, ONTARIO**

- **Two new gold zones discovered on different structures**
- **Shear hosted gold structures 7.35m wide in hole DC06-04, including 5.5 gm gold per tonne over 1 m**
- **19.0m gold bearing disseminated sulphide zone in altered rhyolite in DC06-09 including 5.98 gm gold per tonne over 1 m**
- **Further follow up drilling on strike underway**

Toronto, Ontario, Canada, April 3, 2006 – Mega Uranium Ltd. ("Mega") (MGA-TSX-V) (through its Maple Minerals division) and East West Resource Corporation (TSX-V: EWR) announce that the drill program initiated in mid January on the Deaty property tested six separate areas of induced polarization (IP) and magnetic anomalies. Holes DC06-01 and DC06-02 on lines 58E and 59E were reported on February 1, 2006 where gold values over a 85m wide area occurred. These two new gold zones discovered occur in a different style of setting than found in the first two holes. Further follow-up drilling will take place in the future. Hole DC06-04 on line 54E cut a mafic shear zone containing silica bands and fine-grained pyrite over a 7.35m width. Assays for this are given on the following table.

Table 1.1 Assay data from drill hole DC06-04

From (m)	To (m)	Interval	Au (g/t)	Ag (g/t)	Cu ppm	Mo ppm
79.65	80.40	0.75	0.16	0.7	848	18
80.40	81.00	0.60	0.10	0.3	313	43
81.00	82.05	1.05	0.27	0.6	373	22
82.05	83.00	0.95	0.87	0.5	215	22
83.00	84.00	1.00	1.27	1	425	147
84.00	85.00	1.00	5.50	1.1	503	7
85.00	86.00	1.00	1.22	0.7	428	28
86.00	87.00	1.00	2.42	0.6	516	13

Follow up drill holes on strike and in section of drill hole DC06-04 commenced in late March to establish the strike and dip of this zone.

A second discovery in hole DC06-09 was made on line 48E on a different structure and different style than the first two gold zones. This zone occurs in an altered rhyolite containing pyrite, minor chalcopyrite (copper) and has been mildly hematized and the sulphides occur as disseminated zones or in fractures filling. Hole DC06-09 is 1000m from DC06-02 (line 58E) and it is possible that these two zones may be related since the iron oxide (magnetite) alteration seen in Hole 2 may be related to a magnetite breccia zone adjacent to the gold zone in Hole 9. This leaves a large unexplored distance between these two holes and magnetite anomalies will be used as a guide for drilling.

Table 1.2 Assay data from drill hole DC06-09 Gold Zone

From (m)	To (m)	Interval (m)	Au (g/t)	Ag (g/t)	Cu (ppm)	Mo (ppm)
67.90	69.15	1.25	0.19	1.9	3360	265
69.15	70.00	0.85	0.09	0.6	240	21
70.00	71.00	1.00	0.07	0.5	314	17
71.00	72.00	1.00	0.11	0.4	410	30
72.00	73.00	1.00	0.31	1.4	2090	34
73.00	74.00	1.00	0.08	0.6	541	20

85.00	86.00	1.00	0.85	0.3	176	5
86.00	87.00	1.00	0.17	0.3	165	16

When analysing for basemetal and silver values (Copper, Silver, and Molybdenum) were determined by ICP (inductively coupled plasma) after an aqua regia acid digestion. Assays exceeding 100 grams silver and 10,000 parts per million (ppm) copper were repeated using multi acid digestion and atomic absorption (AA). Check assays were run on high values.

Gold values were determined by fire assay extraction on 30 gram samples followed by an AA finish.

Preparations of the samples outlined in this news release were carried out by ALS Chemex in Thunder Bay and assaying was carried out by ALS Chemex in North Vancouver.

Mega Uranium Ltd (TSX-V: MGA) and East West Resource Corporation each hold a 50% interest in both the Hamlin and Deaty Creek-Shebandowan properties.

The project set out above is being supervised by R. Middleton, P.Eng. who is the Qualified Person and the person responsible for quality control of the assaying and reporting. More details are available on SEDAR at www.sedar.com.

Mega Uranium Ltd. is a Toronto-based mineral resources company with a focus on uranium properties in Australia, Argentina, Mongolia, Bolivia and Canada. Further information on Mega can be found on the company's website at www.megauranium.com

This news release contains forward-looking statements within the meaning of the "safe harbour" provisions of the Private Securities Litigation Reform Act of 1995. These forward-looking statements are subject to risks and uncertainties and other factors that may cause Mega's results to differ materially from expectations. These include risks relating to market fluctuations, property performance and other risks. These forward-looking statements speak only as of the date hereof. Mega Uranium disclaims any intent or obligation to update these forward-looking statements and cautions investors from placing undue reliance on forward-looking statements. Mega does have an ongoing obligation to disclose material information as it becomes available.

THE TSX VENTURE EXCHANGE HAS NOT REVIEWED AND DOES NOT ACCEPT RESPONSIBILITY FOR THE ADEQUACY OR ACCURACY OF THIS RELEASE.
